PCOG BuyBack with Profits

PCOG BuyBack with Profits Mechanism

1. The customer invests into one of the crypto investment pools in Sentient DeFi dApp (USDT, USDC, BTC).
2. The investment pool will move the investment amount to the trading environment.
3. When the profit distribution cycle starts, it will convert the generated profits into PCOG tokens through buybacks from DEXs.
4. The customer will be able to withdraw the profit in the form of PCOG tokens.
5. The buyback will increase the PCOG token's value and the price in the market.

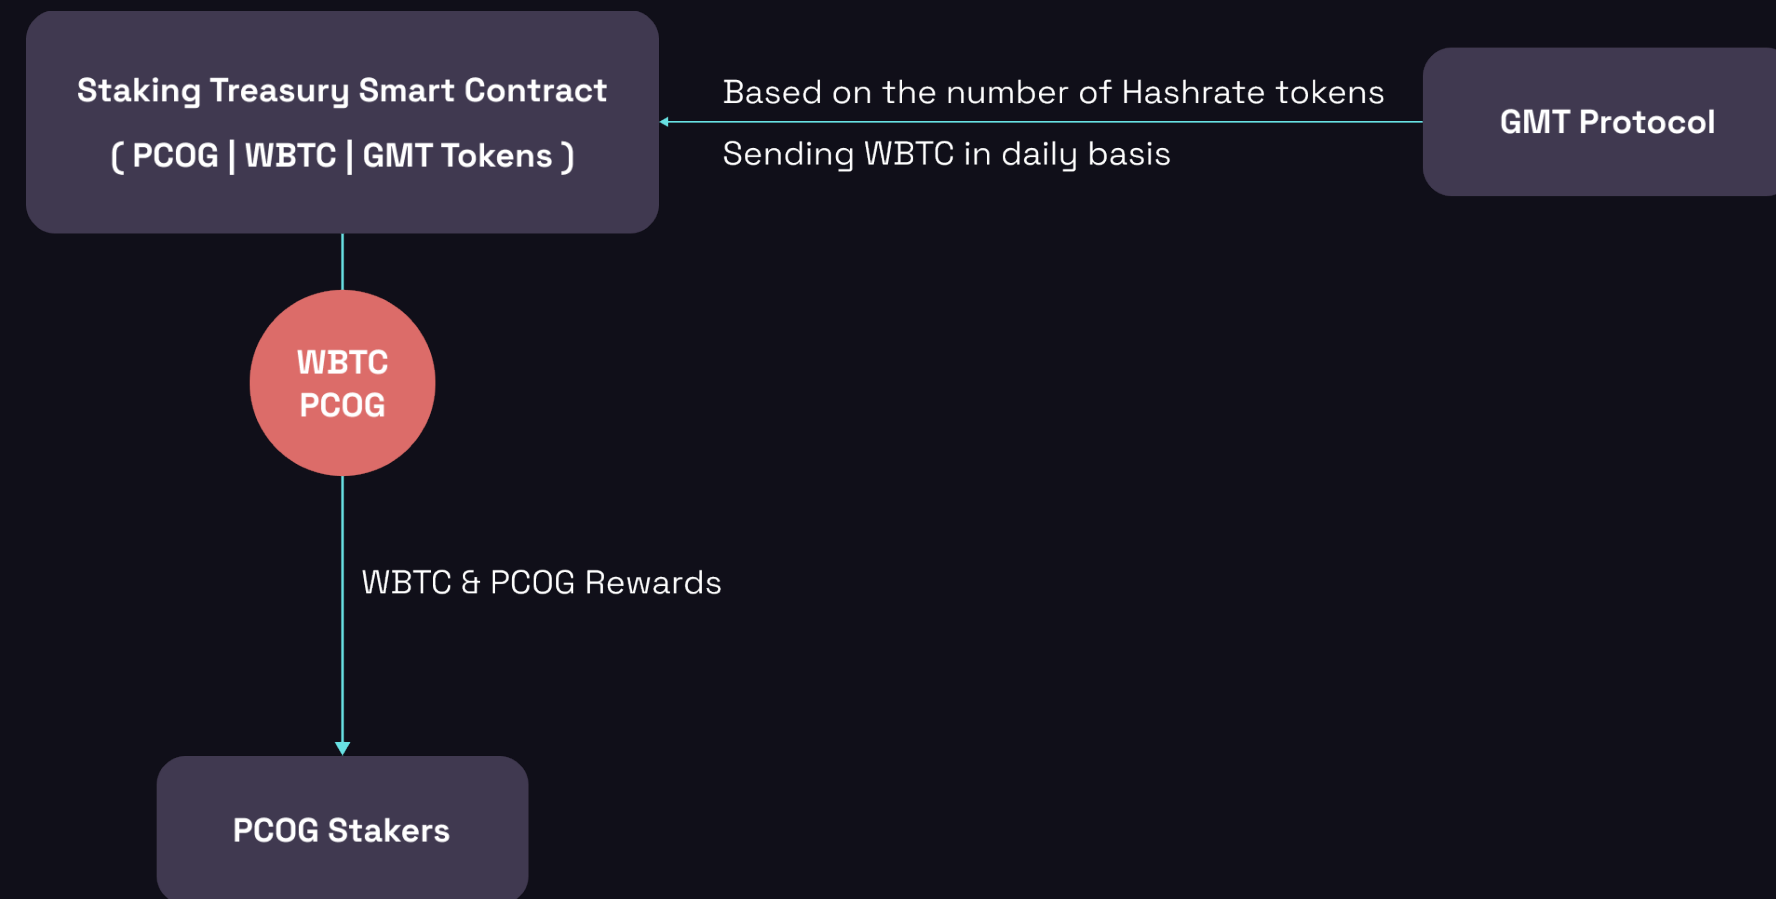

Hashrate Tokens Buying Mechanism

1. Sentient has a profit distribution cycle.
2. With each cycle, a percentage of the profit will be deducted.
3. This percentage of the profit will be used to buy Hashrate tokens.
4. Examples of Hashrate tokens are GMT.IO and BTCST.Finance.
5. These Hashrate tokens will be saved into the staking treasury smart contract.
6. With each profit distribution cycle, additional Hashrate tokens will be bought and deposited into the treasury smart contract.

Hashrate Passive Income & Rewards Distribution Mechanism

1. With every Sentient profit distribution cycle, additional hashrate tokens will be deposited to the treasury.
2. Everyday, based on the number of Hashrate tokens in the treasury, the Hashrate DeFi protocol will send wrapped BTC (WBTC) to the treasury.
3. The increase of Hashrate tokens will increase the passive income.
4. The treasury will make wrapped BTC available for the stakers to withdraw, in addition to PCOG tokens.
